

Log2Log v1.0.4 Released

Deltik, Tuesday 17 March 2015 - 20:46:01

Log2Log v1.0.4 has been released, and here is a screenshot showcasing the new format converter:

(I know my French isn't perfect...)

New Features

- Ability to convert to Windows Live Messenger chat logs
- A slightly more readable incompatibility description box

Bugfixes

- The Pidgin source converter malfunctioned and gave zeroed timestamps due to poor programming practices combined with Qt framework updates.
- The Windows Live Messenger default log path has been corrected.

Credits

Thank you Jennifer! Jennifer contacted me requesting a converter from her Pidgin so that she could use them with Windows Live Messenger.

To make this possible, I needed to know the formula to generate Microsoft Passport numbers. Thanks to [Harry Parsonage's .NET application \(Deltik mirror\)](#), this was possible.

Windows Live Messenger was discontinued a few years ago, and its usage is disabled by default, but there exists a significant community that wants to keep Windows Live Messenger alive. At the time of writing, people can use [Messenger Reviver](#) to continue using Windows Live Messenger.

Though a new version of Log2Log v1.x has been released, it is running on limited support. New format converters are being created only on demand.
